

What Types of Injuries Do We Handle?

Nerve Damage

Nerve damage occurs when an injury splices, crushes or pinches your nerve, or when your nerve is stretched or compressed.

Catastrophic Injuries

A catastrophic injury leaves an accident victim with life-changing impacts and long-term consequences.

Traumatic Brain Injuries (TBIs)

Any accident resulting in a strong impact can lead to a TBI. Depending on the severity, a TBI may cause cognitive impairment, mood alteration, and other physical, mental, and behavioral effects.

Neck Injuries

Common neck injuries resulting from personal injury accidents include whiplash, herniated disk, spinal cord injuries, among others.

If you or your loved one has recently been injured due to another person's negligence, contact our office to schedule your free case consultation.

What Types of Injuries Do We Handle?

Back Injuries

Common back injuries include compression fractures, disc damage, facet joint injuries, sacroiliac joint inflammation, herniated discs, and whiplash and soft tissue injuries.

Concussions

A concussion can result in a catastrophic injury. Depending on the severity of the injury, a concussion can cause a person to lose their ability to perform activities of daily living, work, and care for themselves and their loved ones.

Hearing Loss/Acoustic Trauma

Acoustic trauma results from injury to the hearing mechanisms of the inner ear. Exposure to high-decibel noise is the most common cause of such trauma. A common acoustic injury is tinnitus.

Facial/Dental Trauma

Facial and dental trauma is a common type of traumatic injury. Facial trauma, also known as maxillofacial trauma, can be a very complex injury to treat. This often requires special medical treatment from a qualified oral surgeon.
